Information input Use Maps
in CHESAR*

Frederik Verdonck

► Sectors

- FEICA (Use Map, SWEDs, SCEDs, SPERC migration)
- EFCC (Use Map, SWEDs, SPERC migration)
- Cosmetics Europe (SPERC migration)
- ESIG (SPERC migration)
- Eurometaux (SPERCs)

▶ SWED input (1)

- Input very straightforward
- Sometimes slight differences between CHESAR and template:
 - Dermal protection: slight different wording
 - Operating temperature: absolute value versus relative value to ambient
- Percentage (w/w) of substance of mixture set as default 100% in CHESAR because can be adjusted by user

▶ SWED input (2)

- SWED report generation helpful for Quality Control
- Sometimes additional Conditions of Use to be defined or added
 - Several ART parameters (done by ECHA)
 - Good advice: protective clothing to protect from splashes
 - Respiratory protection 80% efficiency dust mask (existing ECETOC TRA CoU was removed)

▶ SCED input

- Input very straightforward
- Frequency of use over a day can not always be completed
- Concentration of substance in mixture (g/g) is set as default 100%
- No SCED report generation (would be useful for Quality Control)

▶ SPERC migration and input

- Wide dispersive SPERCs: explanation field for the local tonnage is lost during migration
- Two small bugs in SPERC generation report:
 - there is no unit in the release fraction table (% to be added)
 - local fraction for the use is set to zero, need more digits

▶ Use Map input

- Input very straightforward
- CHESAR field not available in template:
 - Tick box “Not used in a water based activity”, impact on calculations? Purpose?
- Where to enter in CHESAR “ES short title for communication” from template?

▶ Use of “Use Map”

- Editing Conditions of Use in CHESAR 3 more limited, to distinguish between:
 - SPERC assessments (using CoU of SPERC)
 - SPERC-based assessments (not really a SPERC but based on SPERC adding CoU or adjusting dilution etc...)

▶ Generation of eSDS and CSR sections 9-10

- SPERC/SWED code and version to be reported with the CA name
- Release factors are not reported in eSDS
