

Technical Committee

Chesar file creation

Borealis/Fertilizers Europe

3 May 2017, Brussels

General Feedback

Box 2:

- Creation of uses is easy and simple in Chesar
- Possibility to copy and paste simplifies the creation

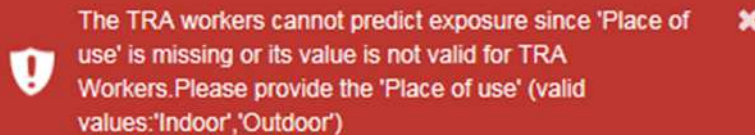

Box 6 (creation of SpERCs, SWEDs, SCEDs):

- Creation is simple, required parameters are limited
- Can only be used when they are active → export, cooperation with others, modification is not simple
- Separate SWEDs for solids and liquids needed

Validation

SWED:

- Condition of use >> place of use “Indoor and outdoor” is possible to be selected but TRA worker requires either indoor or outdoor

The TRA workers cannot predict exposure since 'Place of use' is missing or its value is not valid for TRA Workers. Please provide the 'Place of use' (valid values: 'Indoor', 'Outdoor')

- Could “minimum” requirements be defined and modified during assessment (duration reduced, respiratory protection applied)?

SpERC:

- How to include an external tool or need the calculated values be manually added?
